

CONTENTS

Preface

Review by Prof. Iliana Marinova, DSc	5
Review by Prof. Milko Yordanov, PhD	9

Acknowledgments	13
------------------------------	-----------

Introduction	14
---------------------------	-----------

Chapter 1. Corrosion protection of current-carrying busbars	23
--	-----------

1.1. Corrosion protection of current-carrying busbars by application of thin magnetron sputtered coatings	25
1.1.1. Introduction of paragraph 1.1	25
1.1.2. Obtaining the test samples	28
1.1.3. Analyzing the deposited coatings	33
1.1.4. Assessment of the influence of the technological parameters on the magnitude of the electrical contact resistance of current-carrying busbars with magnetron sputtered thin coatings	49
1.1.5. Assessment of the influence of magnetron sputtered coatings on the electrodynamic forces of current-carrying busbars	59
1.1.6. Corrosion resistance tests	69
1.1.7. Conclusions on paragraph 1.1	78
1.2. Corrosion protection of current-carrying busbars by application of thin coatings, deposited by reactive arc method in the N ₂ atmosphere	80
1.2.1. Introduction of paragraph 1.2	80
1.2.2. Obtaining the test samples	81
1.2.3. Analyzing the deposited coatings	83

1.2.4. Conclusions on paragraph 1.2	90
Chapter 2. Wear and corrosion protection of electrical contact elements of electrical apparatus	91
2.1. Wear and corrosion protection of electrical contact elements of electrical apparatus by application of nanostructured coatings, obtained by arc evaporation of titanium target	93
2.1.1. Introduction of paragraph 2.1	93
2.1.2. Obtaining the test samples	103
2.1.3. Analyzing the deposited coatings	115
2.1.4. Investigation of the electric wear of the contacts	143
2.1.5. Investigation of the electrical contact resistance of the contact systems with deposited nanostructured lattices	154
2.1.6. Investigation of the electric arc's burning time of contacts with nanostructured coatings	162
2.1.7. Corrosion tests results	170
2.1.8. Conclusions on paragraph 2.1	175
2.2. Improvement of the wear resistance of the electrical apparatus contacts by combined application of vacuum technologies	178
2.2.1. Obtaining the test samples	180
2.2.2. Analyzing the deposited coatings	183
2.2.3. Conclusions on paragraph 2.2	196
Summary and general conclusions	197
Publications	199
