

# Table of Contents

- About the Author ..... ix**
- About the Technical Reviewer ..... xi**
- Acknowledgments ..... xiii**
- Introduction ..... xv**
  
- Chapter 1: Creating and Setting Up Your Project ..... 1**
  - Creating Your Web Application Project ..... 1
    - Using the .NET CLI ..... 5
  - Adding and Editing Razor Pages ..... 9
  - Looking at the Configuration ..... 19
  - Working with Entities ..... 23
  - Creating and Registering a Data Service ..... 29
  - Displaying Test Data on Your Web Page ..... 34
  
- Chapter 2: Creating Models ..... 39**
  - Building a Search Form ..... 39
    - Adding Font Awesome ..... 39
    - Adding the Search Form Code ..... 40
  - Implementing the Find Logic ..... 43
  - Using Model Binding and Tag Helpers ..... 46
  - Displaying Related Data ..... 53
    - Passing the Video ID Through to the Detail Page ..... 59
  - Working with Page Routes ..... 63
    - Populating Video Details ..... 68
  - Handling Bad Requests ..... 71

TABLE OF CONTENTS

- Chapter 3: Modifying Data ..... 79**
  - Editing Existing Data and Using Tag Helpers..... 79
    - Building the Edit Form..... 87
    - Changing the Data Service ..... 95
  - Validate Edited Data and Display Validation Errors ..... 97
    - AddSingleton vs. AddScoped vs. AddTransient..... 102
    - Implementing IValidatableObject..... 103
  - Adding a New Video ..... 107
  - Modifying the Data Access Service..... 109
    - Modifying the OnPost Method ..... 110
  - Working with TempData ..... 111
    - Changing the TempData Provider ..... 115
- Chapter 4: EF Core and SQL Server ..... 119**
  - Entity Framework Core ..... 119
  - Install Entity Framework ..... 120
  - Implement DbContext ..... 124
  - Specify Database Connection Strings ..... 125
  - Working with Database Migrations ..... 132
  - Implement a New Data Access Service ..... 142
  - Changing the Data Access Service Registration ..... 145
- Chapter 5: Working with Razor Pages ..... 149**
  - Using Sections in Your Razor Pages..... 149
    - Meta Tags and CSS..... 151
    - Navigation..... 152
    - @RenderBody..... 152
    - Footer ..... 152
    - Scripts Applied Across All Pages ..... 152
    - @RenderSection..... 152

What Are `_ViewImports` and `_ViewStart` Files? ..... 155

    Specifying a Different Layout Page ..... 157

    Creating a Custom TagHelper ..... 161

Working with Partial Views ..... 165

    Adding Video Properties and Updating the Database ..... 167

    Adding Markup to the Partial View ..... 170

Working with ViewComponents ..... 176

**Chapter 6: Adding Client-Side Logic ..... 183**

    Separate Production Scripts from Development Scripts ..... 183

    Setting Up SCSS and Generating CSS ..... 187

        SCSS Partial Files ..... 199

        Using SCSS `@mixin` ..... 201

        Using SCSS `@extend` ..... 204

        Using SCSS Functions ..... 208

    Working with Chrome Developer Tools ..... 212

        Dragging Elements ..... 213

        Adding and Modifying Styles ..... 215

        Add a New Class ..... 218

        Testing State Changes ..... 219

        Throttling Network Speed ..... 221

    Wrapping Up ..... 223

**Chapter 7: Exploring Middleware ..... 225**

    What Is Middleware ..... 225

        Handling Exceptions ..... 227

        UseHsts ..... 228

        UseHttpsRedirection ..... 230

        UseStaticFiles ..... 230

        UseRouting ..... 232

        UseSession ..... 232

        UseEndpoints with MapRazorPages ..... 233

# Introduction

.NET Core has given .NET developers a lot to think about. Some developers have embraced the technology, while others have taken a wait-and-see approach. Whatever approach you are taking, .NET Core is without a doubt here to stay.

Developing web applications is also not one of the easiest things to do. I've always wanted to write a book on developing web applications, but to do it in a way that is very structured and takes the reader on a journey of discovery.

*Creating ASP.NET Core Web Applications* is my attempt at that book. I always try to take the point of view that the book I'm writing is a reference book for my bookshelf. With this in mind, I, therefore, tried to cover a wide set of topics.

As with all projects, Chapter 1 starts with creating your project and using the .NET CLI. We have a look at adding Razor pages and also how to configure the application using the `appsettings.json` file. I then create a dummy data service, which is used to get the application up and running with test data. This test data is designed in such a way that it can easily be swapped out at a later stage (and I show you how to do this).

Chapter 2 takes a look at the process of creating models, model binding, tag helpers, working with a query string, and page routes. To illustrate these concepts, Chapter 2 shows you how to implement a search form. This allows us to search for data, view the details, and add in logic to handle bad requests.

Chapter 3 illustrates the concepts of editing the data, displaying validation errors, and modifying the data access service to suit our needs. I also discuss the differences between singleton, scoped, and transient lifetime registration for services.

EF Core and SQL Server become the focus in the next chapter. Chapter 4 shows you how to install Entity Framework Core, define your connection strings, what database migrations are, and how to use them. We will also be implementing a new data access service and changing the data access service registration from the test data to the SQL data.

## INTRODUCTION

Moving to the front end next, we have a look at working with Razor pages in Chapter 5. Here, we will look at what sections are and how they benefit you as a developer. We take a closer look at `_ViewImports` and `_ViewStart` files. I also show you how to create your own tag helper, how to work with partial views, and, finally, how to work with `ViewComponents`.

Staying front end, we have a look at adding client-side logic in Chapter 6. I show you how to separate production scripts from development scripts, use SCSS to generate CSS, how SCSS works, and the different features you can use to create CSS with SCSS, as well as work with Chrome Developer Tools. This is, in my opinion, crucial for any web developer to know.

With Chapter 7, we will take a look at what middleware is. This is a very important chapter and one that will require some explaining. We have a look at some of the built-in middleware components, but also how to create a custom middleware component if the built-in middleware components don't suit your needs. After creating a custom middleware component, we will have a look at logging in ASP.NET Core. Logging is a big subject, but this book tries to cover the basics.

Finally, Chapter 8 will take you through getting your web application ready for deployment and finally publishing your web application and hooking it up to a SQL Server database. I hope that you will enjoy this book as much as I enjoyed writing it.
